Summary

Flutter developer with 2+ years of experience building production fintech and marketplace apps for Android and iOS, shipped on Google Play and the App Store. At NeoCash I work across the Flutter apps and contribute to the Go backend behind them. Before that I built and shipped Ajarra, an event marketplace, almost single-handedly (694 of its 707 commits). I work with Riverpod and BLoC, REST and real-time APIs, Firebase, payment SDKs and offline-first data, and I write about real Flutter bugs on my blog, *Daily Flutters*.

Technical Skills

- **Languages & frameworks:** Dart, Flutter, Go, Kotlin, Java (native Android)
- **State management:** Riverpod, BLoC/Cubit, Provider
- **Data & backend:** REST APIs (Dio), Socket.IO/WebSockets, Firebase (Auth, Firestore, Storage, Cloud Messaging), Supabase, Drift/SQLite, SQLCipher, Isar, Hive
- **Architecture:** clean architecture, offline-first sync (outbox pattern), go_router, Freezed, GetIt
- **Third-party SDKs:** Paystack, Flutterwave, Stripe, Razorpay, Google Maps and Places, ML Kit, camera
- **Testing & delivery:** unit, widget and integration tests, GitHub Actions CI, Git, Play Store and App Store releases
- **Design & tools:** Figma-to-Flutter UI, Material and iOS interface guidelines, Android Studio, Xcode, VS Code

Experience

Software Engineer, NeoCash (Shepherd Trust Microfinance Bank) | Lagos | Jan 2026 – Present

NeoCash customer app, live on Google Play and the App Store

- Redesigned the onboarding flow, increasing customer retention by about 15%.
- Built ten loan-rejection recovery flows driven by the backend's decision log, guiding customers to fix each rejection reason (documents, guarantors, contact verification by OTP, loan amount).
- Built on-device guided face capture with ML Kit (pose and smile checks, upright frames), the step-by-step KYC orchestrator, and location-aware address verification with Google Places.
- Migrated transaction PINs from device-only storage to the server without losing any, handling conflicts, fresh installs and lockouts.
- Contributed to the NIBSS direct-debit mandate flow for automatic loan repayments.
- Made architecture and performance improvements that cut app crashes by about 25%.

Vault Mobile, an offline-first field-agent app for onboarding customers and starting loan applications

- Main contributor, with 360 of its 448 commits. Built with Riverpod 3, Drift, Dio, go_router and Freezed.
- Extended and hardened the outbox sync engine that reconciles the local Drift database with the Go backend once the device is back online; I wrote over half of its current code.
- Delivered customer onboarding, KYC documents, two-photo selfie capture with on-device expression checks, collateral, guarantors and the agent affiliate area.
- Added tests to a 113-file suite (unit, widget and integration) that runs in GitHub Actions CI, alongside an emulator check that the local database is encrypted at rest with SQLCipher.

Mobile Developer, AJ's Rentals Ltd (Ajarra) | Lagos | Jun 2025 – May 2026

Event-management and vendor marketplace app, live on Google Play and the App Store. I wrote 694 of its 707 commits.

- Built real-time chat on Socket.IO with an offline send queue, delivery and read receipts, media, and voice notes.
- Built an in-app calendar from scratch with day, week and month views and side-by-side layout for overlapping tasks.
- Implemented co-planning, so creators, co-planners and viewers share an event with different permissions.
- Integrated Paystack paid profile boosts through hosted checkout, and Flutterwave for one-time bookings with transaction verification, across an escrow-based booking flow.
- Implemented Firebase Cloud Messaging with notification taps that open the right screen, Google Places address autocomplete, and shake-to-send diagnostics with redacted logs.

Flutter Developer, Deolang (Guest House Finder) | India (Remote) | Jan 2025 – May 2025

- Converted Figma designs into a responsive Flutter app using BLoC, REST APIs and Razorpay payments.

Flutter Developer, Hermex Travels | Lagos (Remote) | Oct 2024 – Dec 2024

- Built an AI customer-support chatbot and Flutterwave payments for flights and hotels.
- Refactored the UI into reusable widgets, cutting boilerplate by about 40%.

Flutter Developer, Decentralyne (Crypto Asset Management) | Lagos (Remote) | Aug 2024 – Oct 2024

- Audited the Android and iOS codebases and fixed performance bottlenecks, reducing crashes by about 40%.
- Shipped new Flutter features that increased user engagement by about 25%.

Network Engineer, Nigerian Ports Authority | Lagos | Apr 2024 – Dec 2024

- Configured routers (BGP), Cisco and Huawei switches (VLANs) and Sophos firewalls, and monitored network performance.

Technical Writing

I write *Daily Flutters*, a blog with 27 posts on real Flutter bugs and how I fixed them. I also post on Coder Legion, where I have 303 points and 16 badges.

- Designing a Scalable, High-Performance Real-Time Social Feed with Flutter
- The Selfie Was Fine. The Pixels Were Sideways.
- The OTP Boxes That Would Not Let Go

Education

BEng Electrical & Electronics Engineering, Obafemi Awolowo University (2020 – 2025)
