Summary

Flutter developer with 2+ years of mobile experience building production fintech and marketplace apps for Android and iOS, all shipped on Google Play and the App Store. I currently build two apps at Neocash: the customer loans app and an offline-first field-agent app for onboarding customers and starting loan applications. I work with Riverpod, BLoC and Provider, and I'm comfortable with REST APIs, Firebase, payment SDKs and Google Maps. I write tested, maintainable code and explain my work on my technical blog, *Daily Flutters*.

Technical Skills

- **Languages & frameworks:** Dart, Flutter, Kotlin, Java (native Android)
- **State management:** Riverpod, BLoC, Provider
- **Data & backend:** REST APIs (Dio), Firebase (Auth, Firestore, Cloud Messaging), Supabase, Drift/SQLite, SQLCipher, Isar, Hive
- **Architecture:** clean architecture, offline-first sync (outbox pattern), go_router, Freezed code generation
- **Third-party SDKs:** Paystack, Flutterwave, Stripe, Razorpay, Google Maps, Places and Routes APIs, Amazon Rekognition, camera
- **Testing & delivery:** unit, widget and integration tests, GitHub Actions CI (format, analyze, test, build), Git, Play Store and App Store releases
- **Design & tools:** Figma-to-Flutter UI, Material and iOS interface guidelines, Android Studio, Xcode, VS Code

Experience

Software Engineer (Mobile), Neocash, Shepherd Trust Microfinance Bank | Lagos (Remote) | Jan 2026 – Present

Neocash customer app, live on Google Play and the App Store

- Redesigned the full onboarding flow, increasing customer retention by about 15%.

- Integrated face verification with Amazon Rekognition, document uploads, and address verification with the Google Maps API.
- Integrated the NIBSS mandate flow so loan repayments are collected automatically.
- Made architecture and performance improvements that cut app crashes by about 25%.

Vault Mobile, an offline-first field-agent app for onboarding customers and starting loan applications

- Main contributor to the codebase, with 353 of its 441 commits. Built with Riverpod 3, Drift, Dio, go_router and Freezed.
- Built an offline-first data layer: a local Drift database is the UI's source of truth, and an outbox sync engine reconciles with the Go backend once the device is back online.
- Delivered customer onboarding, KYC document and two-photo selfie capture, collateral, guarantors, and an OTP-gated loan submission that requires a connection.
- Implemented JWT bearer auth with stale-session handling, and encrypted the local database at rest with SQLCipher.
- Wrote 113 unit, widget and integration test files. Set up GitHub Actions CI to check formatting, run code generation, analysis and tests, and build the Android app.

Flutter Developer, Ajarra Hospitality | USA & Nigeria (Remote) | Jun 2025 – Jun 2026

Event-management and vendor marketplace app, live on Google Play and the App Store

- Built an in-app calendar with daily, weekly and monthly views for events and tasks.
- Integrated Paystack subscription billing for vendor profile boosts, and Flutterwave for one-time bookings with transaction verification.
- Built Google Maps navigation: Places autocomplete, Routes API directions with polylines, live client location tracking, and distance and ETA estimates.
- Implemented Firebase Cloud Messaging for booking, payment and reminder notifications.

Flutter Developer, Deolang (Guest House Finder) | India (Remote) | Jan 2025 – Jun 2025

- Converted Figma designs into a responsive Flutter app using BLoC, REST APIs and Razorpay payments.

Flutter Developer, Hermex Travels | Lagos (Remote) | Oct 2024 – Dec 2024

- Built an AI customer-support chatbot and Flutterwave payments for flights and hotels.
- Refactored the UI into reusable widgets, cutting boilerplate by about 40%.

Mobile Engineering Intern, Decentralyne (Crypto Asset Management) | Lagos (Remote) | Aug 2024 – Oct 2024

- Audited the Android and iOS codebases and fixed performance bottlenecks, reducing crashes by about 40%.

Technical Writing

I write *Daily Flutters*, a blog with 27 posts on real Flutter bugs and how I fixed them. I also post on Coder Legion, where I have 303 points and 16 badges.

- Designing a Scalable, High-Performance Real-Time Social Feed with Flutter
- The Selfie Was Fine. The Pixels Were Sideways.
- The OTP Boxes That Would Not Let Go

Education

BSc Electronics & Electrical Engineering, Obafemi Awolowo University (2025)
